

Texas Natural Resource Conservation Commission

| Interoffice Memorandum | |
|------------------------|---|
| To: | Rob Chambers Permit Writer, I & HW Permits Section |
| Thru: | Paul DeCiutiis Team Leader, NSR Coatings and Combustion Section |
| From: | Joseph B. Weiner Permit Engineer, NSR Coatings and Combustion Section |
| Date: | December 11, 1996 |
| Subject: | BASF Corporation - Freeport Permit No. HW-50128 Class 3 Modification Application for Incinerator IN-4702 Expansion Application Received by I & HW Permits: August 16, 1996 |

Rob-

This is in response to your request for comments regarding the referenced permit modification application. Since incinerator IN-4702 operates under Air Quality Permit 7596A/PSD-TX-284M1, air quality regulatory requirements will be considered in a pending amendment to that permit. Under the "two-stop" permit review process, the modified incinerator will operate under Industrial Solid Waste Permit No. HW-50128 and Air Quality Permit No. 7596A/PSD-TX-284M1.

Accordingly, the New Source Review Division has limited the review of the Class 3 Permit Modification to air-related RCRA issues. Specifically, we have reviewed the trial burn plan included as part of the modification application. Please see the attached memorandum from John Survis of the Engineering Services Section.

In addition to the remarks included in the attached memorandum,

Feel free to contact me with any questions at x2619.

-Joe
